

Product Introduction

Butterfly Disconnect

Kitchener, ON, Canada – CompX Precision Slides proudly introduces the Butterfly Disconnect, a unique take apart feature.

The Butterfly Disconnect system easily releases the inner slide member from the slide. However, the key advantage is the effortless re-installation. The Butterfly Disconnect is an option available across the full range of CompX Precision Slides; Light, Medium and Heavy Duty ball bearing slides.

It joins the Lever Disconnect and the Latch Disconnect in the take apart portfolio offered on CompX Precision Slides. Disconnect features are used in the pedestal, rack and server and appliance industries either for installation purposes during manufacturing, or for specific use at the consumers' site, such as cleaning of the drawer or service calls.

For more information on the Butterfly Disconnect, call 866-521-8028, or email us at precision.slides@compX.com.
